

# We operate in a regulated environment

## CREG

- Coverage of all reasonable costs and remuneration
- Incentives to reduce the manageable costs and ancillary services
- Remuneration on Equity (no WACC remuneration, embedded debt principle)

## CREG ofgem

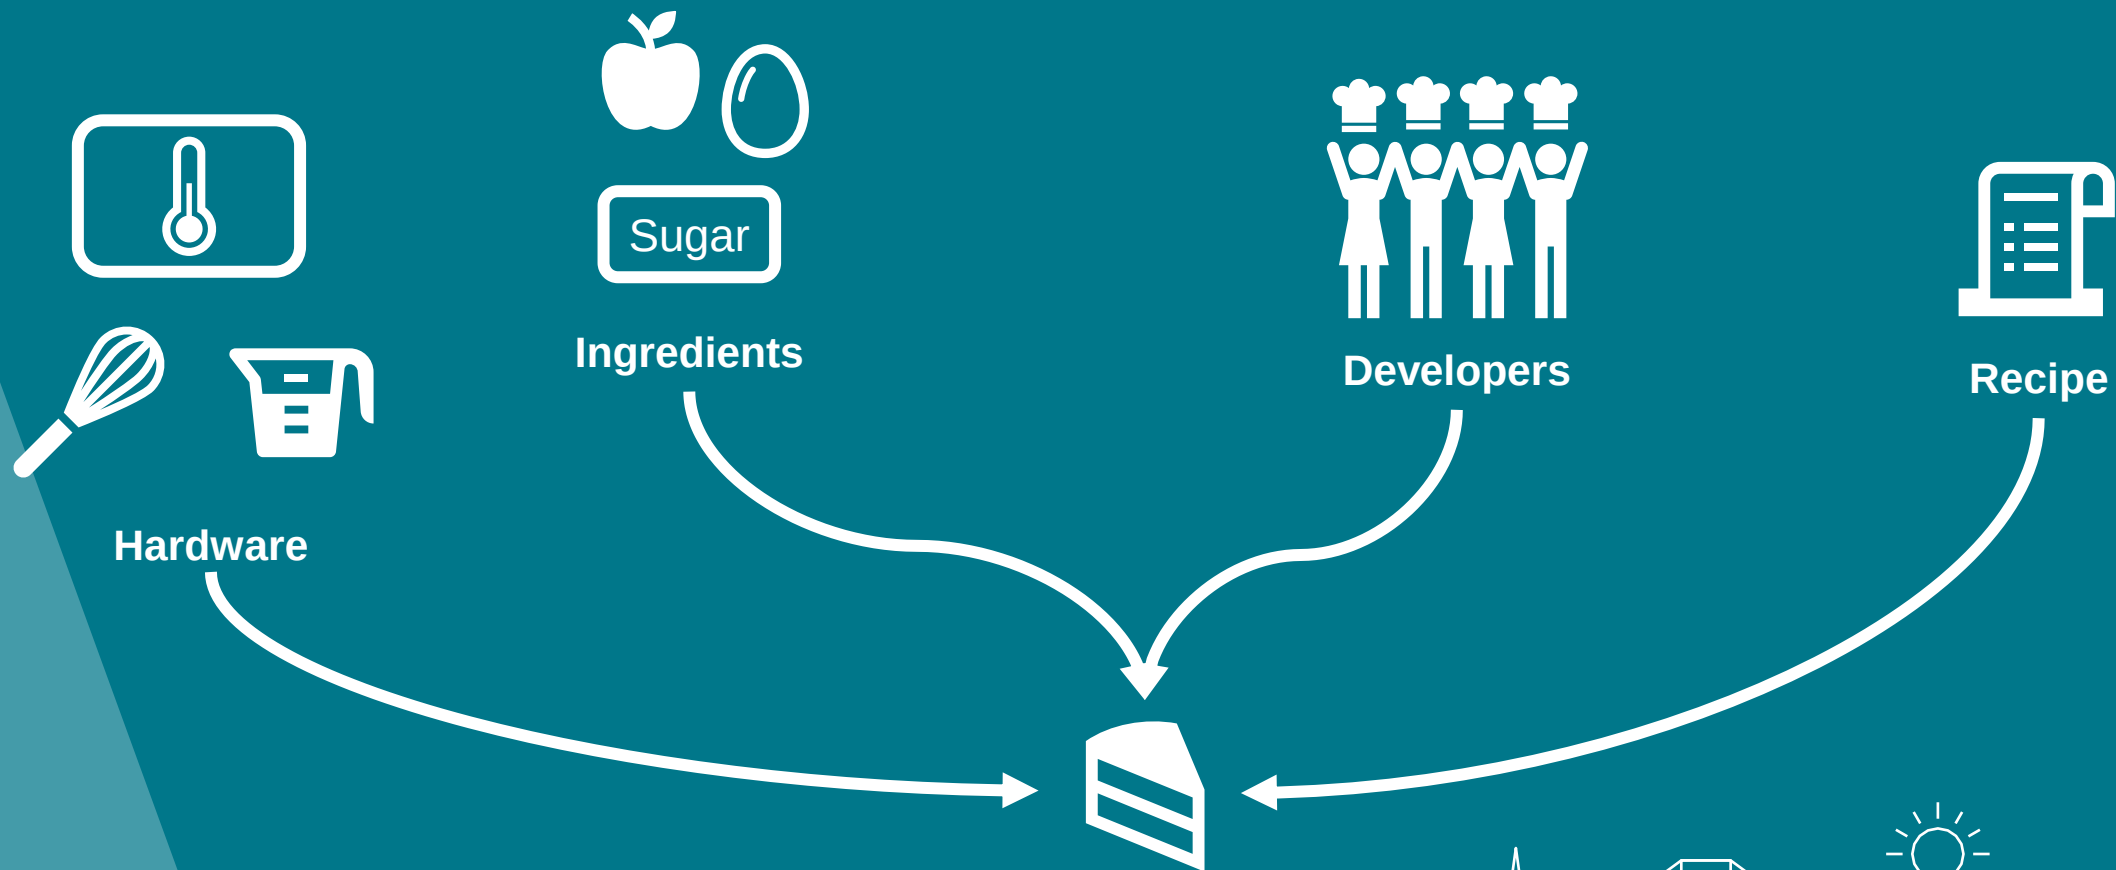

- Cap and floor model
- Revenues are determined based on market price difference and interconnector capacity use

(German regulator) sets caps for revenues for grid operators based on benchmarking and individual cost basis of the operator, adjusted for inflation and general efficiency factors. Cost-plus for offshore

# Open Source explained

**What do we need?**

# OSPO apple cake recipe!

## Ingredients

25 g butter

125 g sugar

3 eggs

½ pack baking powder

250 g flour

1.5 kg peeled apples

a lot sugar with cinnamon

## Technical data

55min

200°C

## RECIPE

- I. Make a batter from butter, sugar, eggs, baking powder, and flour.
- II. Cut apples into large pieces and fold into the batter. Put everything in a greased 26 cm springform pan and smooth the top
- III. Bake at 200°C (top/bottom heat) on the lower rack for ~55 minutes
- IV. After 45 minutes, brush with butter and sprinkle with sugar or cinnamon sugar
- V. If the cake browns too quickly, cover with baking paper.
- VI. This cake is moist, delicious, and goes perfectly with whipped cream.

## History of the OSPO

|         |                                                                      |
|---------|----------------------------------------------------------------------|
| 2020    | first steps into an OSPO with external consultants without strategy  |
| 2024/25 | OSPO officially founded and with first strategic decisions (0.2 FTE) |
| 09/2025 | first FTE in the OSPO position                                       |
| 01/2026 | first open-source project released?                                  |

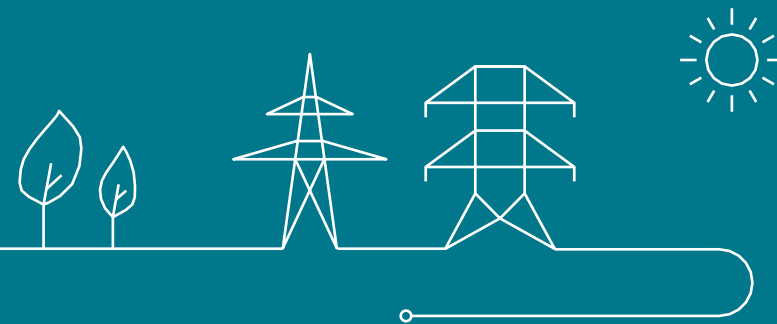

## Current maturity of Open Source @ Elia Group

1. **Denial** – No or unconscious use of open source
  - What's GitHub?
  - Can we security scan all open source developers?
2. **Consumption / Usage** – Passive use of OSS
  - Can't I just copy all code? It's free anyway?
3. **Contribute** – Engagement & contributions with open source communities
  - Let's just contribute a bit. Just once.
4. **Creation** – Starting to make own repositories
  - We have to do it together. Better anyways!

**Companies are not homogenous – maturity differs between persons/teams**

# Work @ Elia Group OSPO

What do we do all day?

# Pillars of the OSPO

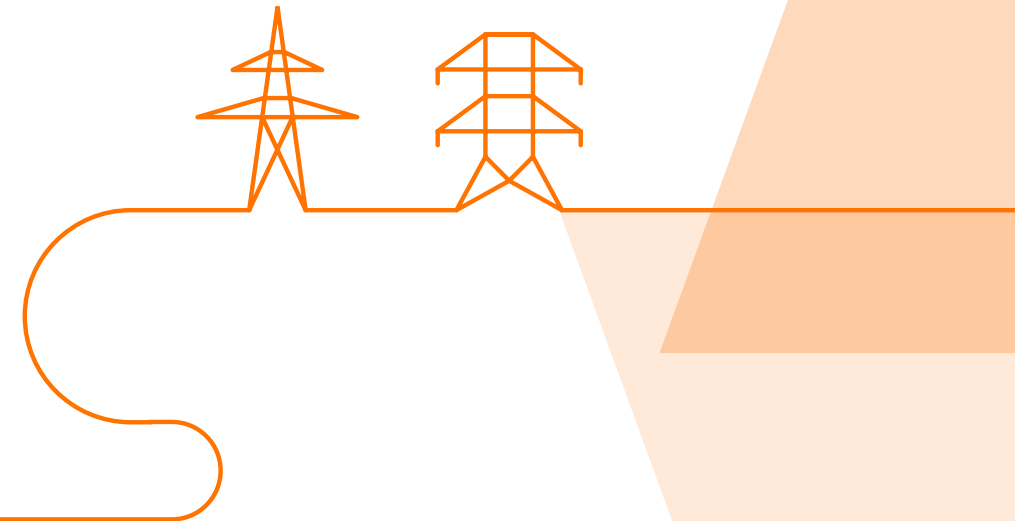

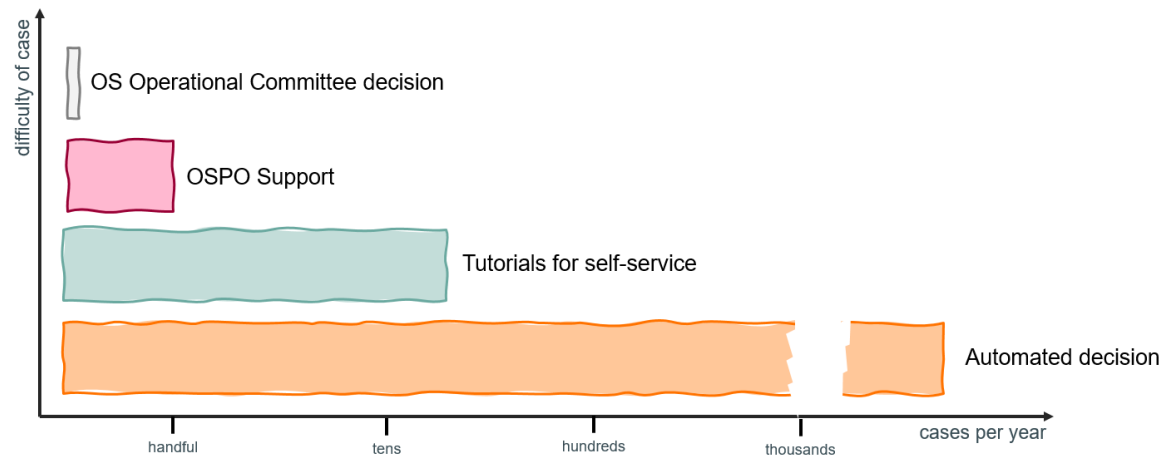

# USE - Current status

**We use Open Source extensively!**

**Four-Layer Approach to Open Source License Compliance**

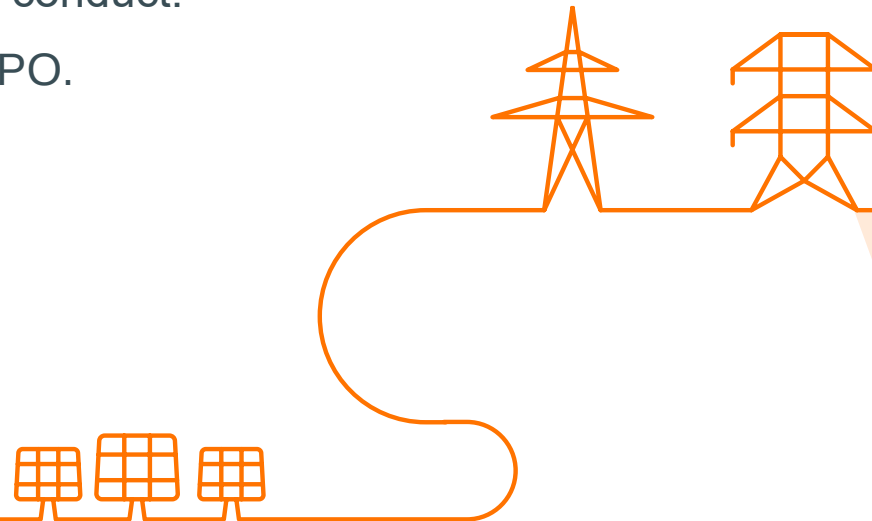

**We offer extensive tutorials for devs to mitigate risks.**

# CONTRIBUTE - Current status

## Checks to ensure liability risks – Currently in TRIAL phase

1. Obtain approval from OSPO ([opensource@eliagroup.eu](mailto:opensource@eliagroup.eu)) before contributing.
2. Only contribute if it benefits Elia Group—and you are the author of the code.
3. Do not disclose confidential info or personal data.
4. Follow the project's contribution guide and code of conduct.
5. Sign required legal documents (CLA/DCO) via OSPO.

## CREATE - Current status

- CREATE proposal has to be accepted by project sponsor
- Department requirements **MUST** be fulfilled
  - IT Sec (security, data security, etc.)
  - Legal (IP transfer, transfer of rights within the group, Belgium & german law, etc.)
- The department heads gives executive sign-off
- After approval, complete prep work and launch the project

# What took you so long?

We picked a

- cross-group,
- security relevant,
- double country regulated,
- already existing

project first!

# Learnings

- Get an OSPO
- Start with a new product from scratch
- Learn from it
- Evolution instead of Revolution.

Thank you!
