

OSPO_Setup_CRESYM

February 2026

CRESYM in a nutshell: non-profit association, about collaborative R&I, delivering open source, non viral results to catalyse the energy transition

- 1 R&I projects
- 2 R&I results = “assets” curation
- 3 Other services (e.g. training)

- Since 2023
 - Efficient & effective toolkit for swift project setup
- Legal framework & common pot

39 CRESYM members 31/12/2025

OSPO Assessment

The screenshot shows the OSPOBook website interface. At the top left is the OSPOBook logo, and at the top right are links for 'BOOK (PDF)' and 'GLOSSARY'. On the left side, there is a search bar and a table of contents. The table of contents lists: 'Table of Contents', 'What's this book about?', 'Chapter 1: Introduction to Open Source Program Offices' (which is highlighted), 'Chapter 2: The Value of Open Source Program Offices', 'Chapter 3: Creating Your OSPO', and 'Chapter 4: Day-to-Day Operations'. The main content area on the right displays the title 'Chapter 1: Introduction to Open Source Program Offices' in a large, bold font. Below the title is a bulleted list of sections: 'Introduction', 'About OSPOs', 'Applying This to Your Organization', 'Conclusion', 'Possible Problems and how to Overcome Them', and 'Resources and Footnotes'.

How an OSPO work inside an organization?

An OSPO considers cross-functional collaboration from four different perspectives:

Looking downward:

The head of an OSPO must manage the team's tasks effectively. Depending on the OSPO's objectives, the team's responsibilities may vary.

Looking upward:

If proposing the creation of an OSPO, managing expectations and aligning with executives' technology needs is necessary.

Looking sideways:

Collaboration with other teams is critical. For instance, in business-oriented OSPOs, collaborating with the developer tools and security teams is essential.

Looking outside:

Representing the organization to external communities and foundations is crucial. The integration strategy must align with the organization's objectives and vision.

Examples for each OSPO Perspective (Cresym Specific – Internal Assessment)

Looking Downward: Internal Open-Source Coordination:

Observed Practices:

- Coordinating open-source assets across projects
- Defining minimum standards for repositories, datasets, tools and documentation
- Supporting contributors (internal and external) through guidance

Identified Maturity Areas:

- Repository structure not yet standardized across projects
- Validation tooling is currently project- specific
- Cross-project stewardship beyond funding cycles is not yet formalized

Looking downward:

The head of an OSPO must manage the team's tasks effectively. Depending on the OSPO's objectives, the team's responsibilities may vary.

Examples for each OSPO Perspective (Cresym Specific – Internal Assessment)

Looking Upward: Strategy & leadership alignment:

Observed Practices:

- Translating executive priorities (visibility, impact, sustainability) into open-source considerations and positioning
- Clarifying realistic expectations regarding open-source impact and limitations

Examples:

- Explaining how open datasets (e.g., RTE7000) increase Cresym's visibility and credibility
- Articulating how open-source outputs contribute to funding leverage (EU proposals, partnerships)

Identified Maturity Areas :

- Executing reporting on open-source impact is not yet standardized

Looking upward:

If proposing the creation of an OSPO, managing expectations and aligning with executives' technology needs is necessary.

Examples for each OSPO Perspective (Cresym Specific – Internal Assessment)

Looking Sideways: Cross-functional collaboration:

Observed Practices:

- Bridging research, IT, legal, data governance, and communication
- Ensuring open-source practices are aligned with security, IP, GDPR requirements

Examples:

- Aligning dataset publication with legal/IP checks and licenses
- Coordinating with IT on infrastructure choices (GitHub orgs, Hugging Face, CI)

Identified Maturity Areas:

- Alignment processes are not yet systematized
- A formalized review workflow for open-source releases is not yet established

Looking sideways:

Collaboration with other teams is critical. For instance, in business-oriented OSPOs, collaborating with the developer tools and security teams is essential.

Examples for each OSPO Perspective (Cresym Specific)

Looking Outside: Community & ecosystem representation:

Observed Practices:

- Representing Cresym in external open-source ecosystems and foundations
- Building trust with academic, industrial partners

Examples:

- Acting as Cresym's interface to LFE, G-PST, TODO Group
- Ensuring Cresym assets discoverable, reusable and properly governed
- Monitoring risk related to unclear ownership or inactive repositories

Identified Maturity Areas:

- External open-source engagement responsibilities are not formally defined

Looking outside:
Representing the organization to external communities and foundations is crucial. The integration strategy must align with the organization's objectives and vision.

Does Cresym need an OSPO?

Cresym already perform several OSPO functions informally.

Key Question:

Should these activities remain informal, or be supported through a dedicated coordination function?

Apt OSPO name for Cresym

Open-Source Program
Office

Open-Source Office

Open-Source Center of
Competence

Open-Source Steering
Committee

Open-Source Software
Team

Apt name as OSPO for Cresym

- Comparison

Open-Source Program Office	Technically correct	For non-profit association, it feels over-corporate with formal governance, legal ownership and centralized authority
Open-Source Office	Not Clear	Lacks clarity
Open-source Centre of Competence	Best Fit 	Matches Cresym's role as a research orchestrator. Emphasizes expertise, coordination and support
Open-Source Steering Committee	Poor Fit	Governance only, lacks execution and operations continuity
Open-Source Software Team	Poor Fit	Focused on code production rather than governance, datasets, community and partnerships

Next Steps

- Work on identified maturity areas
- Identify OSPO or similar role among members
- OSPO Communication channel
- Prepare a knowledge base
- Create Cresym Opensource webpage
